

# DS5 Shell Metal Clip

Sustainability as a gift from the sea.

Writing instruments made from partially recycled plastic enriched with recycled shells.

## Product characteristics

In its Shell design, the DS5 Metal Clip comes with an entirely natural look and is made from plastic enriched with recycled seashells. An elegant metal clip hovers above the casing as stylishly as a surfboard riding the perfect wave.

## Materials

30% of the DS5 Shell casing is made from recycled seashells. The remaining 70% comes from high quality recyclable plastic, 50% of which is recycled directly on-site from plastic waste generated in our manufacturing processes. In accordance with EU sustainable design guidelines, Prodir gives priority to on-site recycling in order to keep the supply chain short for recycled materials and to eliminate the need for long-distance transport as well as the associated social and ecological costs.

## Refill

All writing instruments come standard with Floating Ball® Lead Free refills, featuring an innovative ink paste that contains no substances classified by REACH as "Substances of Very High Concern" (SVHC) as per last ECHA update. The refills are in compliance with standard ISO 12757-1 and 2, documentary proof. They glide easily over the paper, offering constantly high writing comfort and quality over their entire life. The jumbo ballpoint pen refill offers a writing performance of up to 5'000 metres. Empty refills can be replaced with any Parker-style ballpoint refill (G2) to extend indefinitely the life of the pen.

## Recycling

All external as well as all metal parts of the DS5 Shell writing instruments are fully recyclable. Internal mechanical components as well as the ink refill, should be disposed of according to local regulations.

## Company

Prodir is a brand of Pagani Pens SA, a global leader in the development and manufacture of promotional writing instruments, combining high-quality, innovative materials, internationally award-winning design, and the ambition to achieve the highest standards of sustainability. The writing instruments are manufactured entirely and exclusively in Switzerland. 100% of the electrical energy used for their production is generated by climate-friendly Swiss hydropower plants.
